

the ADministrator

the ADministrator® is a commercial insertion software package designed to address many of your daily business tasks. It can operate independently or interactively with any manufacture of commercial insertion hardware.

the ADministrator® boasts many big and little "time-savers": program, product, priority, and transaction codes to eliminate repetitious typing, an automatic commercial scheduler to stifle trafficking confusion.

the ADministrator® will organize and catalog your SPOT library. An internal invoicing system ensures the client is invoiced for spots that ran.

the ADministrator® will create invoice's statements and affidavits at the touch of a key. The AutoScheduler®, one of the most powerful features of **the ADministrator®**, is a productivity tool that functions by selectively gathering contractual, customer, and network information from your database and using it to automatically prepare your commercial schedules. This time saving benefit reduces the cost associated with contract review, contract management, and trafficking. We've included in excess of 100 reports and have the flexibility to add additional reports to satisfy your needs.

the ADministrator® will interface to digital insertion using standard software protocol.

the ADministrator

Traffic and Billing Software

Microsoft WINDOWS® based, Contract Driven
The TRAFFIC and BILLING SOFTWARE that will enhance and fit
your advertising needs on a budget you can afford.

FEATURE	ADVANTAGE	BENEFFIT
