DOCSIS 3.1 Certified

DOCSIS 3.1 takes Internet speeds to a new level, increasing the capacity of HFC networks by more than 50 percent and reducing latency. This means your customers can connect more devices, enjoy richer digital experiences and get fast, reliable Internet service for all of today and tomorrow's needs.

The Power of Wi-Fi 6

802.11ax isn't just better Wi-Fi. It revolutionizes Wi-Fi. It expands the Wi-Fi band from 80MHz to 160MHz – that means blazing speeds. It uses bigger 8x8 uplink/downlink, MU-MIMO, OFDMA, and BSS to deliver up to 4x more device capacity. And it uses a 4x longer OFDM symbol to create more than 4x more subcarriers for increased coverage and speeds. The result is rock solid, ultra-fast coverage for all your smart home, gaming, mobile and media devices.

DOCSIS 3.1 is a CableLabs standard for high speed Internet access that defines support for up to 10 Gbps downstream and 1 Gbps upstream. Actual cable operator network speeds will vary and will be less than the calculated maximum possible speeds. Actual upload and download speeds are affected by several factors including, but not limited to: the capacity of your cable operator's network, the services offered by your cable operator, cable and Internet network traffic, your computer equipment etc. Final speeds will also be limited by each device and the quality of its connection to the modem or router.
